CLASSE

CLASSE LM-56
SCIENZE
DELL'ECONOMIA

The master program in Economics-Scienze Economiche is divided into two curricula: curriculum Standard and curriculum Internazionale. The latter one permits students to obtain a double degree from the Universities of Udine and Graz. The courses offered in the two curricula are the same, and all of them are taught in English. The program of Curriculum Standard is entirely held in Udine, while students enrolled in Curriculum Internazionale are required to spend a semester at the Department of Economics of the University of Graz, achieving there at least 30 ECTS, in order to obtain the double degree. Students who plan to attend courses in Graz can apply for grants reserved to them and assigned according to the rules established by a specific announcement of selection.

Learning objectives

The master program in Economics-Scienze Economiche follows the learning objectives set by the Italian Ministry of Education (degree class L-56) and it gives an education comparable to other international Master in Economics. This allows students to access PhD courses both in Italy and abroad. The master program provides students with theoretical background and empirical training in economics, at an advanced level. It ensures that students gain an education with solid foundation in economic theory, applied economics, and acquire a good knowledge on policy issues. Consistently with these objectives, a supporting knowledge of mathematical and statistical methods of analysis is provided. Furthermore, a proper training in related fields of business and law is assured, in order to guarantee a wide variety of career and job opportunities. In a rapidly changing economic environment, it is important for both public institutions and private companies to hire people who are flexible and capable to analyse the markets and the economic system thanks to the tools learned during the program.

Professional opportunities

The master degree gives students a strong flexibility when accessing the job market. A graduate student in economics is prepared for specialised and managerial activities in qualified research centres, authorities, executive positions in the public sector, financial institutions, banks, consulting firms, and other kinds of firms. The knowledge offered by the program also allows students to continue their education to PhD level.

CONOSCENZE RICHIESTE PER L'ACCESSO

Per gli studenti con titolo di studio italiano per l'ammissione al corso di laurea in Economics - Scienze Economiche occorre possedere uno dei requisiti curriculari consultabili all'indirizzo riportato di seguito.

The requirements to be eligible for admission differ for students with Italian undergraduate degree and students with foreign degree. International students: must have completed at least a relevant Bachelor's education (i.e., bachelor degree with a major in economics, or in mathematics, engineering).
